Category - Science and Technology in 2050

1st Place

My imagination in 2050 is roaming the world with satellite, Developing many type of aircraft, building modern residents, a aeroplane with swimming pool and so on.

By B. Oviya , 7th STD

3rd Place

In Year 2050 I expect to see technologies like: linking human brain to computer, fully self driven vehicles, Ai, Humanoids, better GM foods, Disease control through Gene Therapy, Space colonization etc.

By Pratyusha Sasmal , 7th STD

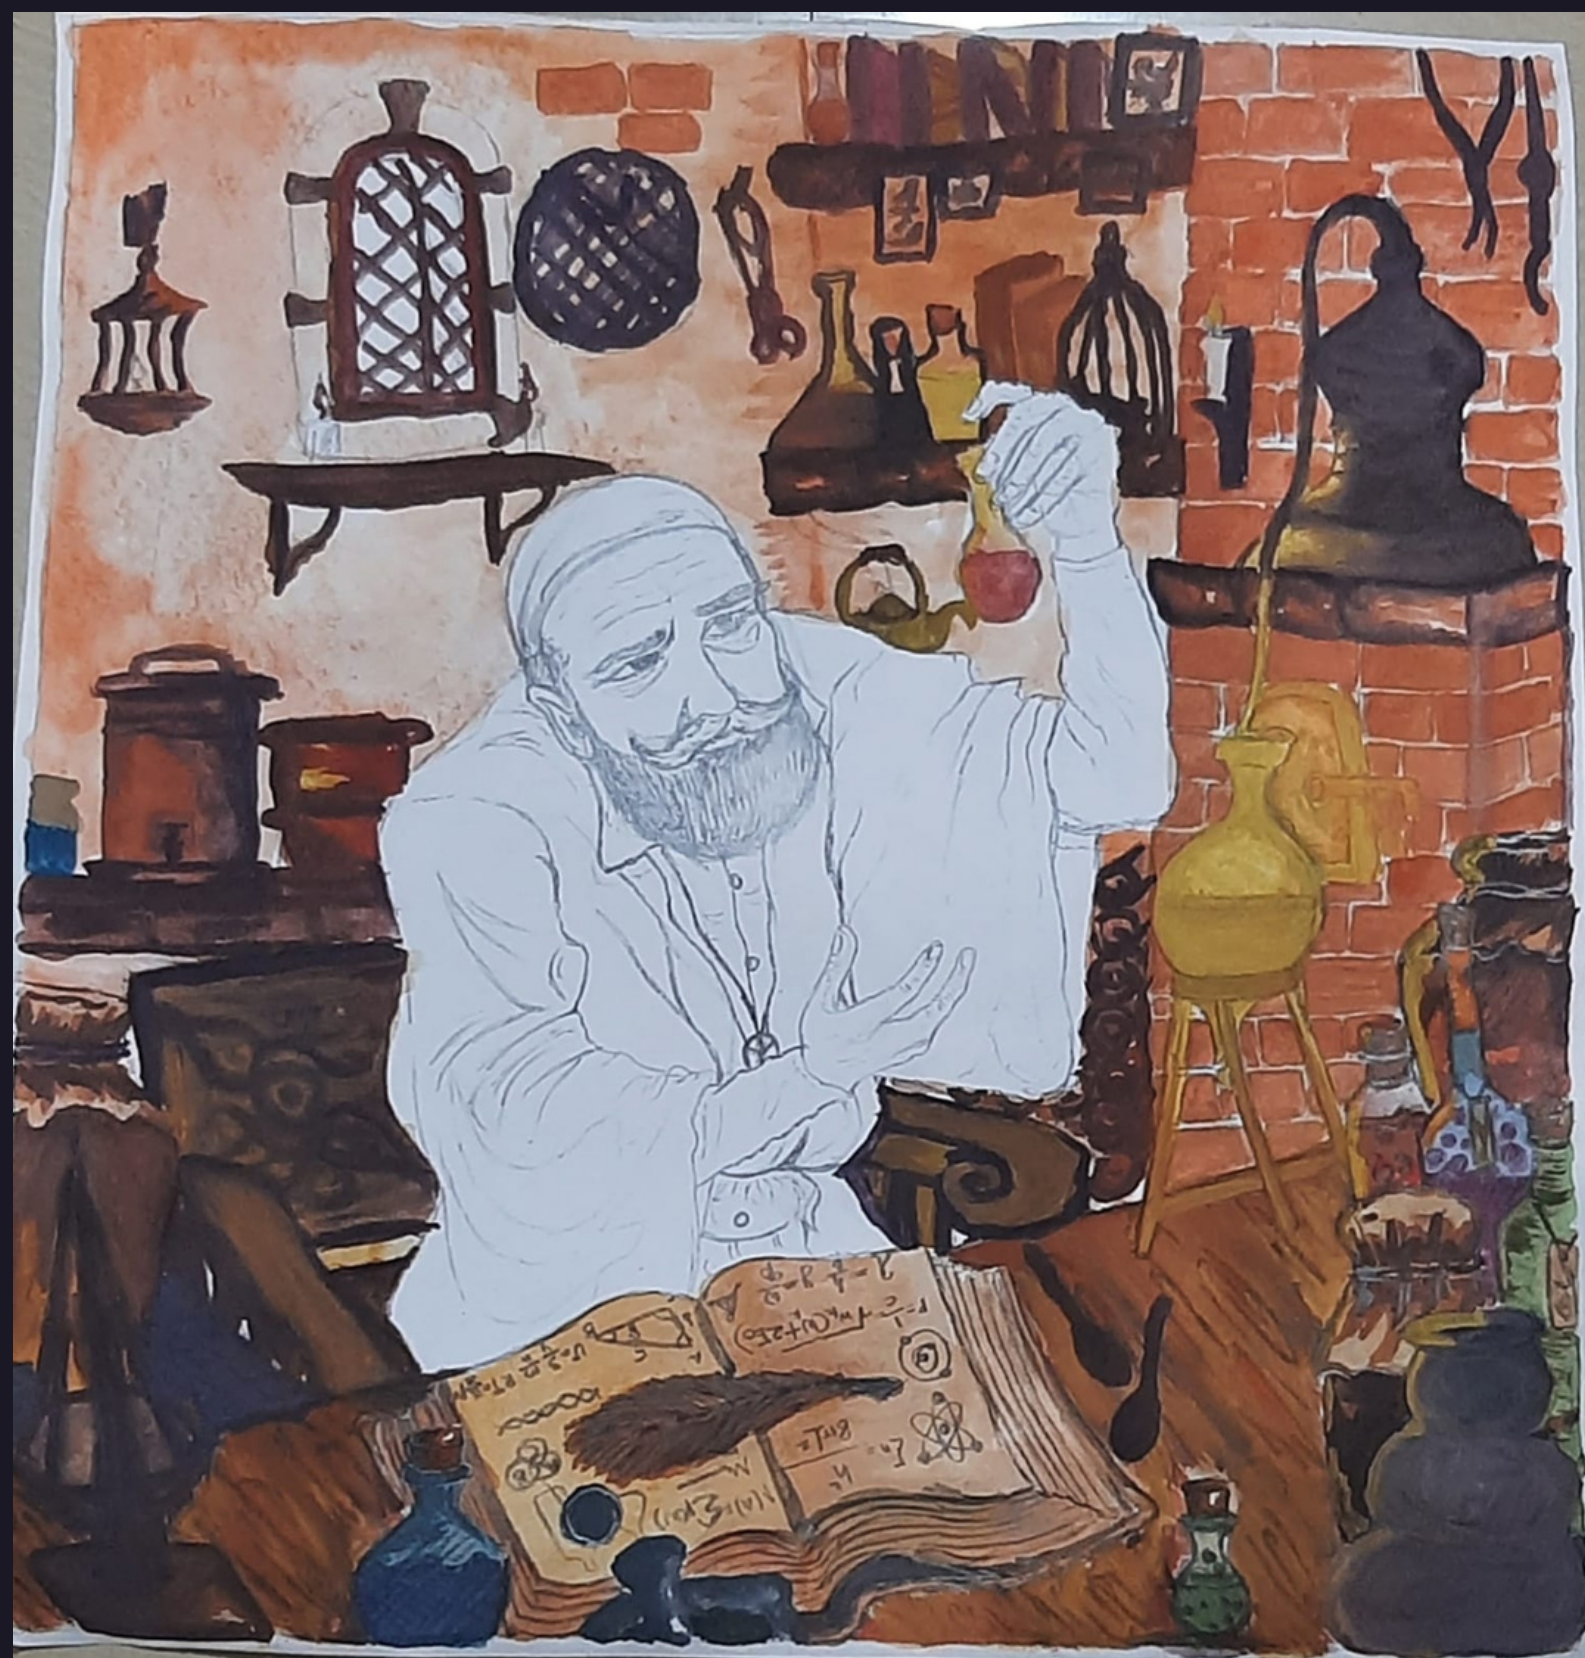

2nd Place

The drawing is about a person wearing a headset with the future technology of Metaverse in it and a couple of people entering the world of it. The portal in the back represents the being of our future cities along with the latest technologies coming in the form of meteoroids; taking over the city which also represents the whole world. Additionally, the portal with the city also depicts a bright yet happy future rather than it being dark and sad.

By Tanish Patare , 7th STD

Category - Life of a Scientist

1st Place

Life of old age scientist

By Rihan V S, 9th STD

2nd Place

"Life of a scientist isn't always as colorful as the chemicals in a laboratory ; but it is as important as the characters in a story".

This also explains why my work sticks on to a black and brown theme. The Nobel prize depicts the appreciation for your achievements in this field.

Thank you for your time.
