Are your answers mostly A, B, C or D?

Flip the page to see what that means for your future in research!

✦ QUIZ RESULTS ✦

Mostly A: Medical Researcher

You care about people and love finding ways to make life better. Medical researchers use biology to understand illnesses and develop new ways to help people stay healthy.

Example: Developing a quick test that helps doctors spot an illness earlier.

Mostly B: Plant Researcher

You're patient and thoughtful, perfect for exploring how plants grow and how to help them thrive in a changing world.

Example: Engineer crops to grow with less water.

Mostly C: Environmental Researcher

You're adventurous and curious about the world around you. Environmental researchers explore how living things can help tackle problems such as pollution and waste.

Example: Studying how microbes could help break down plastics.

Mostly D: Biomaterial Researcher

You love coming up with fresh ideas and wondering, "What if?" Researchers in this field explore ways to make useful materials through biological processes.

Example: Creating leather alternatives to stop animal cruelty.
